

List of Objectives referencing to the different Topics

Matrices Operation:

Object #1. Write a program in Java to add two 3×3 matrices with proper data validation. Matrices can be assumed.

Object #2. Write a program in Java to Subtraction of two 3x3 matrices with validation. Matrices can be assumed.

Object #3. Write a program in Java to multiply two 3x3 matrices with validation. Matrices can be assumed.

Object #4. Write a program in Java to compute the sum of all elements in 3x3 matrix. Matrix can be assumed.

Object #5. Write a program in Java to find out the Transpose of a matrix. Matrix can be assumed.

Object #6. Write a program in Java to perform the different types of mathematical operations on a matrix. Matrix can be assumed.

Object #7. Write a program in Java to perform the sum of diagonals of a matrix. Matrix can be assumed.

Object #8. Write a program in Java to prove a matrix is a Magic Square matrix. Matrix can be assumed.

Object #9. Write a program in Java to solve three simultaneous equations using matrix method in java by applying row operations.

Functions (Use of Parameter and Argumens):

Object #10. Write a program in Java to Find Sum and Average using function. Data may be assumed by user.

Object #11. Write a program in Java to Find Sum and Average using function. Data may be assumed by user.

Object #12. Write a program in Java to develop the Student Result System (multiple functions) by using function. Data may be assumed by user.

Object #13. Write a program in Java for addition of Matrices by using Functions. Matrices may be assumed by user.

Object #14. Write a program in Java to calculate the factorial of number entered by user.

Object #15 Write a program in Java to Check whether the Number is Prime or not by using function. Data may be assumed by user.

Object #16. Write a program in Java to write a function HammingCods() that replaces elements at positions 1, 2, 2^2 , 2^3 , with h1, h2, h3, Given an array of size N initialized with "d": Example (N = 10):

Plain text [d,d,d,d,d,d,d,d,d,d]. or N can assumed.

Data Read from a File:

Object #17. Write a program in Java to read structured sales file (including heading and multiple fields and store into an object and perform some operation on those fields. Sample sales file may be designed by user and path can be use to read data from particular file. Print input and output as well as.

Object #18. Write a program in Java to read structured country file (including heading and multiple fields and store into an object and perform some operation on those fields. Sample country file may be designed by user and path can be use to read data from particular file. Print input and output as well as.
